

## Enterprise server and archival solution for Business and Enterprises

In a highly competitive global economy, where business uncertainties are frequent and compliance with multiple regulations is binding, organizations facing challenging task in keeping pace with changing business trends. In this situation, the primary challenges is to keep the IT organization synchronized with the business strategies to ensure deliverance of maximum business value while reducing IT cost.

This paper describes the importance on Relgo product and services and the frame work done for its client. This paper also recommends to approach Organizations must take to build the foundation for this combination framework that ensures constant alignment of business with Enterprise server.

### The Connected Directory- Organize employee Hierarchy

With lack of proper governance framework, many organizations today do not have adequate visibility into their IT assets. The problem is compounded when organizations are not able to trace and track the relationships, resources, and Tasks. The result is tilted decisions, unwarranted spending and a continuous struggle to meet business demands and user expectations. Another crippling factor for corporate consultants is to connect with stake holder network based on the relationships, resources, tasks and history. This process of connecting the stake holders as well as employees in the organization is based on technology solutions. The business/employee hierarchy is build with a solution platform through the enterprise server.

The distinctive technology background of most large organizations represents a assortment of applications that has over time, become large and unwieldy to monitor. As a result, most organizations often find it difficult to give information that is vital for ensuring alignment of business operations with information technology.

## Technology Highlights

Core platform is Software Development Kit (SDK) and is available for services, Desktop applications, Smart phones, mobile devices and third party web applications this technology helps in building any type of business application creating the access through the Relgo.net. Social graph building, accessing, search and inference functions are available as web service methods for the business needs of the organizations. It consists of reduced development cycle for building powerful CRM applications. Relgo Utilize latest web based technologies ASP.NET, AJAX, .NET etc. to build the platform for the business solutions based on relations and grouping.

## Effective Relgo enterprise server

The framework for enterprise server consists of flexible resource that can be applicable for different purposes for different organization structures, roles and responsibilities and business metrics. Depending upon the need, the framework will be supported by a good Information Technology Gateway tool. The Information Technology Gateway framework will help to administer and manage both the application assortment and project assortment. Some of the assortments for Relgo Email Server are as follows

- ➔ The Email server configuration to suit your requirements.
- ➔ Store and exchange profiles.
- ➔ Private, shared and trusted networks.
- ➔ Personalized stake holder networks.
- ➔ Private information and resource sharing.
- ➔ Periodic statements and reports.
- ➔ Item and service masters.
- ➔ Notifications.
- ➔ Live chat for all internal account users.
- ➔ Administration module for accounts creation, control and secure login for users.

It is essential that each asset and project in the IT assortment is to be monitored through “gateway” and every item on this gateway will be examined for its fitness to deliver business value on a continuous basis. While managing the portfolio on a day-to-day basis, there should be a process in place to continuously seek out opportunities for optimization.
